

ANKITHA V CHANDAN

Udupi, Karnataka | +91 8310554698 | ankithachandann@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience designing, developing, and testing backend systems and RESTful APIs using Python, FastAPI, Flask, and Django. Skilled in building modular, scalable backend architectures with CRUD operations, database integration, authentication, and third-party API integration across PostgreSQL, MySQL, and SQLite. Experienced in API testing and validation using Postman and pytest, with a strong foundation in writing clean, maintainable, and performance-oriented code. Additional exposure to integrating AI-based capabilities as supporting features within larger backend-driven applications.

EDUCATION

MCA — Kristu Jayanti (Deemed University), Bengaluru CGPA: 8.76	2024 – 2026
BCA — Dr. G. Shankar Government Women's College, Udupi CGPA: 8.80	2021 – 2024

TECHNICAL SKILLS

Programming Language: Python

Backend Frameworks: FastAPI, Flask, Django

API Development & Testing: REST APIs, Postman, Pytest, Pydantic

Databases: PostgreSQL, MySQL, SQLite

Version Control & Tools: Git, GitHub, Docker

Libraries: NumPy, Pandas, Sentence Transformers

AI/ML : Machine Learning, Deep Learning, PyTorch, OpenCV, LLM Integration, Agentic AI, Retrieval-Augmented Generation (RAG), ChromaDB, Vector Databases, Prompt Engineering

INTERNSHIP EXPERIENCE

AI/ML Engineer Intern — UptoSkills, New Delhi (Remote) *Dec 2025 – Jun 2026*

Project: Smart Task Management System | Python, FastAPI, PostgreSQL, REST API, Postman, pytest

- Designed and developed a backend task management system using FastAPI and PostgreSQL, structuring data pipelines across 3+ task categories with a modular, scalable architecture.
- Built and tested 10+ REST API endpoints with full CRUD functionality using FastAPI, validating request/response reliability with Postman and pytest.
- Engineered automated reminder and priority workflows, and designed a modular backend enabling real-time data processing across calendar, dashboard, and filter modules.
- Incorporated supporting classification and text-extraction features to enhance task categorization and scheduling within the backend workflow.

PROJECTS

LuminaryAI Studio v3 — Multi-Module Backend Platform with AI Integration

Python • FastAPI • PostgreSQL-style Modular Design • Docker • REST APIs • ChromaDB • Google Gemini • OpenAI

- Architected a scalable multi-module backend platform using FastAPI, exposing 10+ tools including a conversational assistant, resume analysis, and content generation modules through well-structured REST APIs.
- Implemented Pydantic-based request/response validation and modular route design to ensure reliable, maintainable API endpoints, and containerized the platform with Docker for production-ready deployment.
- Built a retrieval pipeline using ChromaDB and Sentence Transformers to support context-aware document retrieval as a supporting feature within the backend.
- Integrated third-party AI APIs (Google Gemini, OpenAI) with streaming response handling, keeping AI functionality modular and decoupled from the core backend logic.

LeafGuard AI — FastAPI Inference Service for Plant Disease Detection

Python • FastAPI • PyTorch • MobileNetV2 • Transfer Learning

- Developed and deployed a lightweight FastAPI inference service enabling real-time, API-driven predictions with confidence scoring for scalable use in production.
- Trained and optimized a MobileNetV2-based classification model on 20,000+ images across 15 categories, achieving 94% test accuracy with strong precision, recall, and F1-score, then exposed it via backend REST endpoints.

FaceAuthBank — REST API Backend for Biometric Banking & Fraud Detection

Python • Flask • MySQL • Scikit-learn • OpenCV

- Designed and built a REST API backend using Flask with a normalized MySQL schema supporting deposit, withdrawal, transfer, NEFT, FD, and RD transaction processing.
- Implemented authentication and a full audit trail for transaction tracking, along with an admin dashboard for monitoring and reporting.
- Integrated supporting ML-based fraud detection and analytics modules (IsolationForest, KMeans, Linear Regression) using Scikit-learn, layered on top of the core transaction backend.
- Applied face recognition (dlib 128-D embeddings) as a biometric authentication mechanism for verifying transactions.

CERTIFICATIONS

- AWS Certified Solutions Architect
- Infosys Springboard — Artificial Intelligence: ML Fundamentals, Neural Networks, NLP, AI Ethics
- Oracle AI Foundation — AI/ML Concepts

ADDITIONAL INFORMATION

Languages: English, Hindi (Intermediate), Kannada (Native)

Leadership: NSS Cadet; Women's Club Member; Volunteer Coordinator — Cultural Fests
